RG und Differential

Um SF und ER Einstufungen im Kontext von RG und Differential zu verstehen, denken Sie an ein Auto. Wenn die Maschine des Autos RG und Differential sind, dann ist das Furnier die Reifen des Autos.

Als eine allgemeine Regel, je tiefer die RG Nummer (2.45), desto schneller kommt er ins Rollen. Je höher die RG Nummer (2.54), desto länger läuft das Produkt bevor es ins rollen kommt.

Für Differential, je Höher die Differential Nummer (.058), desto Größer ist das allgemeine Hakenpotential. Je Niedriger die Differential Nummer (.040), desto Niedriger das Hakenpotential.
